

Amkai, Inc announces the availability of Amkai CPOE, Integrated Computerized Physician Order Entry.

Waterbury, CT – August 3, 2006 - Amkai, Inc., a leading developer of Electronic Health Records (EHR) for ASC's, Surgical Hospitals and affiliated physicians, announced today the availability of Amkai CPOE (Computerized Physician Order Entry system). This addition to Amkai's ASC and SH EMRs increases efficiency and helps to reduce errors, resulting in a potential reduction in liability. This new product uniquely strengthens Amkai's lineup of leading edge software solution offerings to the outpatient healthcare environment.

AmkaiCharts CPOE handles physician orders by procedure and by physician. For example, a cataract procedure by one surgeon, may have a different set of standing orders than the same procedure done by another surgeon. The orders are comprehensive, including medications, nursing orders, discharge and ancillary orders. A pharmacy component for SH's and any facility with an in-house pharmacy will route the orders to the pharmacists for pre-approval.

Orders may be deleted or appended at any time. Deleted orders remain on the list but display with a strikethrough line over them. Color coding verbal orders provides users with all the information they need with just a quick glance, and approving or disapproving any order is just a click away. Orders entered into Amkai CPOE may be signed electronically by the physician at a later time, and administrators are alerted to any unsigned orders.

Home medications brought to the facility by the patient may also be approved as part of post op orders. Clinical alerts may be set per order by staff to facilitate interdepartmental mission critical communications. AmkaiCharts will remind users of time sensitive medication and physician orders, and will alert administrators to orders that are past due.

The automatic workflow routine built into Amkai CPOE routes the appropriate orders to the appropriate department. Thus, operative orders will be displayed in that department. On the very same screen the orders can be marked as performed. When administered, all medications are automatically recorded on the patient's MAR (Medication Administration Record).

"Amkai CPOE exceeds in capability other CPOE's costing more than \$100k. It is available to our clients at a fraction of that," said Craig Veach, Senior VP of Amkai. "It is just another example of our drive to deliver a comprehensive and total software solution to our clients," he added.
